(54) AXIAL FAN

(57)Abstract:

PURPOSE: To provide an axial fan capable of reducing a rotational degree component uniformly dispersed by suppressing excellence of a specific blade degree component generated according to unequality of a fan blade space.

CONSTITUTION: Of each fan blade A, B, C, D, E formed with a narrow blade space, by arranging mounting angles of the fan blades (C blade, E blade) in a rotational direction front side so as to increase an axial flow directional speed, a turbulence generated from flow interference between the blades is avoided, to suppress excellence of a specific blade degree component.
